Microsoft Azure Machine Learning
# Quick Challenge

Step 1 : Go to Azure Machine Learning webpage http://azure.microsoft.com/en-us/services/machine-learning. Click "Get started now"

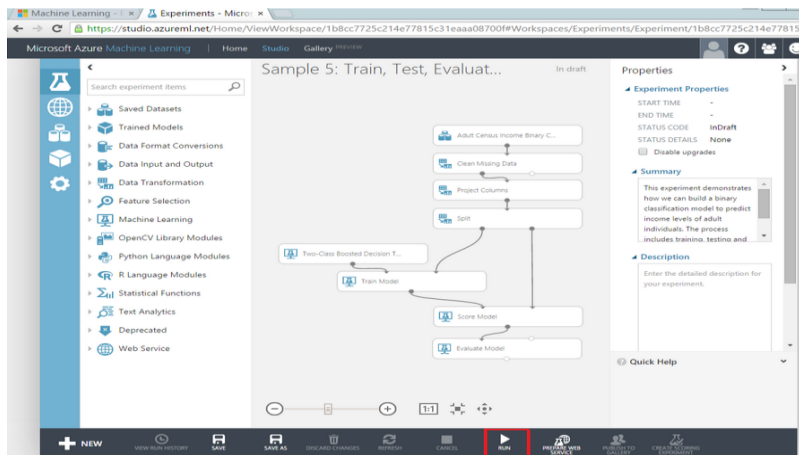

**Step 2 :** Sign up for a Microsoft ID, if you don't have one

**Step 3 :** Search for an example experiment (e.g "Binary Classification"

Step 4 : Open experiment in Azure Machine Learning Studio and train predictive model by clicking "Run"

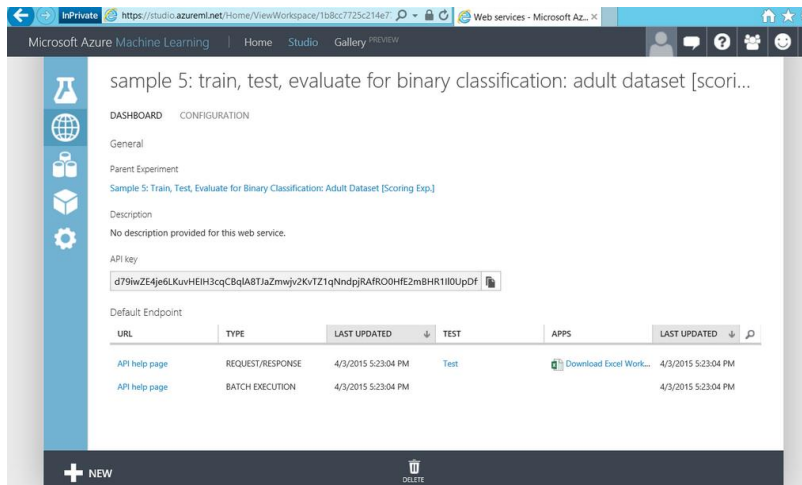

Step 5 : Create scoring experiment by clicking "Create Scoring Experiment "

Step 6 : Ccick on Publish web Service to publish the experiment as a web service

Step 7 : Click on the globe icon in the left palette and you can find the Web Service URL and API key

Congratulations! You have trained a predictive model, created a scoring pipeline with the model, and operationalized the model by publishing a web service.

Show this model to anyone on the booth and get some COOL SWAG !!
